

PAGANI GOES GREEN

We strongly believe in sustainable logistics.

We know that alone we cannot save the world, but we are also sure that everyone can do their part, transforming their ethical and moral commitment to the environment, society and its management ethics.

Our priority is the impact generated by climate-changing emissions due to various gases, including CO₂

Our first step was to opt for rail transport methods in our territory, through our Partners, and try to achieve a substantial **reduction in diesel consumption and CO₂ emissions** per kilometer traveled

We have taken a small step and we are pleased to share this result with you:

In 2022 we saved more than 12 tons of CO₂ emissions

CO 2 EMISSIONS RATIO YEAR 2022

DOMESTIC TRANSPORT

Summary

Number of shipments	1'882
Total weight transported (kg)	1'140'886
Total tonnes-kilometres (tkm)	324'765
Total CO2e emissions (kg)	14'684

Details by means of transport

	ROAD	TRAIN
Shipments number	330	1'552
Total weight transported (kg)	1'140'886	685'511
Total tonne-kilometres (tkm)	130'483	194'282
Total CO2e emissions (kg)	14'436	247

Share of rail transport 82.47%

Thanks to climate-friendly rail transport, CO2 emissions of 12'334 kg were saved. This corresponds to a saving of over 4600 liters of diesel
